- The CCF Barcode ID on the Custody and Control Form does not match that on the Sample Acquisition Card (SAC).
- Negative - is defined as an EtG level that is less than 2.0 pg/mg.
- Body hair sample submitted.
- Screening by Mass Spectrometry (MS). Confirmation by MS. A "Negative" result means that the drug was not detected in an amount that meets or exceeds the cutoff. A "Positive" result means that the drug was detected in an amount that meets or exceeds the Mass Spec cutoff.
- Technical questions concerning these results should be directed to the Laboratory Director. Please contact your Client Services Representative for assistance.
- Psychemedics conforms to the recommendations of the Society of Hair Testing and utilizes a Thermo Quantum GC/MS/MS instrument (tandem MS) with deuterated internal standards for the accurate measurement of Ethyl Glucuronide in hair.
- For the identification of abstinence or Low to Moderate Consumption, no further testing is necessary. For the identification of Excessive Alcohol Consumption, it is generally recommended that an additional hair, blood, or urine test specifically designed to identify other ethanol-consumption indicators be used.
